

## Troubleshooting

Sprayer stops working after a few seconds=

Filter in tank needs cleaning (See "How to Clean Tank" video)

Compressor won't shut off=

There is a leak somewhere, check the release valve & connections

Or

Compressor is going out (pinch air line & if it shuts off, the

Compressor is ok, if not compressor is bad.

Compressor won't turn on=

Check outlet

Tap on the box on the side of the compressor

Replace compressor

Sprayer is leaking=

Replace sprayer

Lid won't seal=

Take off the O-ring & clean off the hair, put back on & try again

Put Vaseline on O-ring to get a better seal

Replace O-ring

Hair is clogging the tip of the Sprayer=

Use scissors, pliers, or knife to take off the tip of the sprayer & clean

Release valve is leaking=

Replace the lid

Tubing won't stay on the disconnect (black or grey)=

Slide the retaining ring up the tubing, remove tubing and shorten,  
then replace tubing and slide ring back down.

Disconnect will not stay on the tank=

Replace disconnect and the O-ring on the knob
